

# Comprehensive Engine Part Repair

**By working with you to understand your specific needs and develop a customized repair solution, Pratt & Whitney repair services delivers high-quality, on-time repairs with proven cost savings. Let us be your first choice for engine part repair.**

With repair centers in North America, Europe and Asia, Pratt & Whitney offers you OEM-level knowledge, solutions-oriented engineering talent and 87 years of experience other MROs cannot match, along with intense customer focus and dedication to lean thinking and innovation. These unique qualities, supported by our lean operating system, allow us to provide you the best part repair solution that meets your specific needs. Welcome to the power of the Pratt & Whitney repair network that completes more than one million repairs every year for a variety of engine types. In addition to all Pratt & Whitney engine models, our network repairs parts for International Aero Engines, General Electric and CFMI models. More than 300 engineers located across the Pratt & Whitney network are dedicated to developing repairs that reduce costs, improve durability, avoid scrap and increase time on-wing.

- **\$200 million saved through scrap avoidance**
- **More than 1 million repairs performed annually**
- **25,000 repairs developed since 2000**
- **Dependable on-time service**
- **Consistent high quality**

# Comprehensive Engine Part Repair

Our customers have saved more than \$200 million through Scrap Avoidance and Value Engineering (SAVE) clinics. In these clinics, Pratt & Whitney inspectors and engineers review individual parts with customers to identify scrap modes and create new repair solutions. In a recent clinic, repairs were developed to save 186 PW2000 engine high-pressure turbine blade outer airseals, saving the customer more than \$224,000 by repairing them instead of scrapping.

The list of examples is long and growing. Our focus on innovation keeps Pratt & Whitney at the forefront of technology.

Pratt & Whitney. **It's in our power.**™
